DETAILED ACTION

Response to Amendment

1. This action is responsive to Applicant's amendment and remarks filed on January 12, 2009. Claims 1 and 3-8 and newly added 9 remain pending.

35 USC § 101

2. The method of claim 8 (renumbered as 7) requires "calculating an angle" for a "given color component space". The claimed calculation is performed by a computer in that only a computer can execute computationally complex processing in a "given color component space" and realize the intended purpose of the invention. A reasonable interpretation of the specification indicates that this step, in addition to the other recited steps, require a programmed computer in order to accomplish the intended purpose of the invention, and there is NO disclosed indication of manual and/or mental activity involved. Therefore, claim 7 is tied to a machine and thus a statutory process.

Allowable Subject Matter

3. Claims 1 and 3-9 (renumbered as 1-8) are allowed.

Art Unit: 2624

4. The following is an examiner's statement of reasons for allowance: the prior art of record does not teach a retrieval unit that calculates an angle between a line, *in a given color space*, connecting a given point, *which is defined in connection with color blindness of a human being*, and one of the colors of the determined color group and a line, *in the given component color space*, connecting the given point and each of the other colors of the determined color group as stated in claim 1, combined with other features and elements of the claim; when *one attention confusion color locus* included in the confusion color locus group *passes through insides of some of the nearby confusion areas*, the retrieval unit determines color contained in the some of the nearby confusion area as a confusion color set as stated in claim 3 (renumbered as 5), combined with other features and elements of the claim; when *one attention confusion color locus* included in the confusion color locus group *passes through insides of some of the nearby confusion areas*, the retrieval unit determines color contained in the some of the nearby confusion area and *a color in a proximity of an attention confusion color locus* as a confusion color set as stated in claim 4 (renumbered as 6), combined with other features and elements of the claim; the retrieval unit determines some of the colors contained in the determined color group as confusion color set based on *block confusion color information associating blocks confused with each other under color blindness of a human being* and *information indicating the block to which each of the colors contained in the determined color group belongs* as stated in claim 5 (renumbered as 7), combined with other features and elements of the claim; calculating an angle between a line, *in a given color space*, connecting a given point, *which is*

Art Unit: 2624

defined in connection with color blindness of a human being, and one of the colors of the determined color group and a line, in the given component color space, connecting the given point and each of the other colors of the determined color group as stated in claim 8, combined with other features and elements of the claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

5. US 7,394,468 is made of record, although not prior art and not relied upon, and is considered pertinent to applicant's disclosure as containing information regarding color spaces, confusion lines and transforming image data for easier distinction for color-blind individuals.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US 7,145,571 is pertinent as disclosing transforming image data for easier distinction for color-blind individuals.
